Microsoft Azure and WhistleB’s Industry-Leading Whistleblowing System Enables Employees To Sound the Alarm

MICROSOFT AZURE SOLUTION BUILDER PROFILE: WhistleB Whistleblowing Centre

The WhistleB online whistleblowing system provides a secure tool for your employees and other stakeholders to raise concerns about irregularities; such as corruption, harassment or discrimination, anonymously and internally. The service includes a case management tool for structured and confidential follow-up of concerns. It is global, multilingual and complies with national data protection laws, including the EU GDPR.

WHAT WE OFFER

How it works
The online Communication channel is accessible from any device to report a concern. The organization whistleblowing team receives a notification and logs into the case management tool to manage the case. The service allows for anonymous dialogue between the reporter and the organisation.

Business benefits
A secure whistleblowing system is the optimal solution for preventing wrongdoings. Our system allows concerns to be followed up in a structured, confidential manner so that facts can be gathered, protecting innocent parties, resolving misunderstanding and reducing reputational and financial damage.

WhistleB plans
With WhistleB you get the features and support that you need. The To Go plan offers a standardised and trusted service ready to launch. With the Buffet plan you pick your features of choice. Our enterprise plan, À la carte, gives you the full range of features and a dedicated account team.

A secure solution
WhistleB offers industry-leading security. It is our top priority to safeguard the anonymity of whistleblowers and to protect customers’ data. The application is developed and hosted on the Microsoft Azure platform for high scalability and flexibility, offering a future-proof service.

WHAT OUR CUSTOMERS SAY

“WhistleB is an easy-to-use system, with relevant features that facilitate the monitoring of reported cases. It is easy to stay in touch with the whistleblower.” Caroline Jakobsson, Head of Corporate Governance, Stena Group

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

**KEY USE CASES**

**WEB APPLICATIONS**  
Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

**CLOUD STORAGE**  
Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

**BIG DATA & HPC**  
Get actionable insights from your data by taking advantage of a fully compatible, enterprise-ready Hadoop service.

**MOBILE**  
Accelerate your mobile app development by using a backend hosted on Microsoft Azure. Scale instantly as your install base grows.

**MEDIA**  
Create, manage, and distribute media in the cloud — everything from encoding to content protection to streaming and analytics support.

**FLEXIBLE APPLICATION MODEL**  
Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft’s promise to let you build using any language, tool, or framework.

**ALWAYS ON, ALWAYS HERE**  
Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

**DATA CENTER WITHOUT BOUNDARIES**  
Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

**GLOBAL REACH**  
With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
